

Examenskod ACEX10

Foundations for Cable car Linbanan?

The estimated project costs already spiraled before considering the foundation. In this project the foundation of the Linbana project will be studied. How can make foundation of a 90 m tall pillar on a 90 m thick deposit of soft clay?

The project is a combination of literature study and simple analyses that look at possible (low-cost?) deep foundation solutions for the Linbana project.

The project can be written either in Swedish or English.

Literature recommendation:

- Various journal papers and internet sources

Target group of students

Civil Engineering

Group size

3-6

Special requirements

BOM355
